SUMMARY

Writer and software engineer building products for financial operations, appointment booking, and community discovery. My work includes rental and trust accounting, invoice processing, and AI-assisted data analysis.

I bring databases, APIs, automation, and interface design together to help people streamline their work and untangle cumbersome, disconnected workflows. Alongside these tools, I write clear, practical guides and walkthroughs to help people put them to use.

EDUCATION

University of Hawai'i at Mānoa

2020 - 2024

B.S., Computer Science · GPA 3.79 · O'ahu

Coursework: Data Structures, Machine Learning, Web Development, Database Systems.

EXPERIENCE

Software Engineer

2025 - Present

HiTech Labs · Kaua'i, Hawai'i

- Develop independent software products for rental operators, service businesses, and local communities, including HAVEN, Chime, CheckINN, and MatchBook.
- Work across product design, database modeling, backend services, and interactive interfaces, connecting each application's components around a complete user workflow.

Accounting Operations & Systems Development

2025 - Present

Hawaii Life · Kīlauea, Hawai'i

- Support reservation payments, deposits, adjustments, and refunds while developing tools that connect accounting work with guest communications, property records, and supporting documents.
- Build insurance renewal and document-collection workflows with Apps Script and Google Workspace, bringing property records, upload portals, and personalized owner correspondence into a coordinated process.
- Automate refund correspondence through Gmail and Drive APIs, assembling guest-specific drafts and matching receipts so staff can review a batch without preparing each message by hand.
- Design AI-assisted invoice workflows that turn varied bills and receipts into consistently named documents and descriptions for accounting entry, supported by practical staff guides and review steps.

SELECTED PRODUCTS

HAVEN · Accounting for rental businesses

Python · FastAPI · SQLAlchemy · PostgreSQL · React · TypeScript

Built an accounting platform for rental managers handling funds on behalf of property owners. It combines bills, payments, bank reconciliation, and owner distributions around a shared financial ledger, with document extraction and bulk processing to carry the work from incoming paperwork through monthly statements.

Chime · Booking and business management

TypeScript · React · Node.js / Express · PostgreSQL · Stripe Connect

Developed a booking platform for service businesses, pairing an online booking flow for their websites with an administrative workspace. Scheduling, staff availability, customer records, Stripe payments, and automated notifications share a common backend, connecting what customers book online with what the business manages day to day.

SELECTED PRODUCTS · CONTINUED

CheckINN · Operations for short-term rentals

TypeScript · Next.js / React · NestJS / Fastify · PostgreSQL

Built an operations platform for short-term rentals, combining listings, availability, guest records, reservations, and turnover tasks. A shared booking engine connects property availability, pricing, and confirmed stays, giving hosts and property teams one view of upcoming bookings and the work each stay requires.

MatchBook · Local events and community discovery

Meteor · React · MongoDB · TypeScript · Leaflet · FullCalendar

Built a discovery app that brings Kaua'i events and community groups into feeds, swipe cards, maps, and calendars. A recommendation service ranks listings by interests and memberships, while an ingestion and review pipeline prepares new listings for publication, helping people find relevant activities across scattered local sources.

AI DATA PROCESSING

Medical records · AI-assisted data analysis

Turned free-text medical notes into a dataset for studying COVID-19 patient patterns. Combined LLM extraction, Pydantic record validation, and FAISS medication matching, then used PySpark to explore related conditions, medication use, and demographic trends.

Invoice ingestion · Email-to-accounting dashboard

Built a dashboard that retrieves email, identifies invoices, and organizes invoice details, accounting memos, and source files in one table. It streamlines invoice processing by preparing entries for staff to copy into Escapia, where direct integration remains dependent on future platform updates.

TECHNICAL & EDITORIAL SKILLS

Languages & Frameworks: Python, TypeScript, JavaScript, SQL, React, Next.js, FastAPI, NestJS, Express, Meteor

Data & Infrastructure: PostgreSQL, MongoDB, SQLAlchemy, Alembic, Docker, REST APIs, webhooks, multi-tenant systems, background workers

AI & Analysis: LLM extraction, Pydantic, FAISS, PySpark, Pandas, D3.js, Plotly, signal processing

Editorial & Communication: Technical explanation, research, structural editing, information design, copywriting, audience adaptation

SELECTED WRITING & DATA VISUALIZATION STORIES

A Near Tie, Decades in the Making

Interactive essay tracing how renewables drew level with coal in global electricity generation.

A Different Direction

Article tracing falling U.S. overdose deaths through local differences and possible explanations.

Interactive companion with CDC charts, a state map, and a policy timeline.

Beyond Scarcity

Speculative essay on AI, scarcity, and control, examining the assumptions behind abundance.

See LinkedIn or my portfolio for more projects and writing.

Tutorials, walkthroughs, and brochures available on request.

ADDITIONAL EXPERIENCE

Creative Writer · Freelance · 2019 - Present

Real Estate Marketing Copywriter · Freelance · 2019 - 2021

Project Manager · Bacchus LLC · 2018 - 2020

Food & Hospitality · Multiple establishments · 2010 - 2018
